B3B9F7E. Can some help me in solving this error? Thanks in advance. A: Your list structure looks good - in your code the structure looks like \$comments = array("Some text", "Some text 2", "Some text 3"); I'd guess that the problem is that your HTML is not valid. This is a syntax error - see the list elements. I'd suggest trying to validate your HTML. A validator like might be a good start. The study of dietary habits, gastrointestinal symptoms and medication use in a group of iron deficient women with gastroesophageal reflux disease. It is supposed that the association between gastroesophageal reflux disease (GERD) and iron deficiency (ID) may be because of common predisposing factors. In our study we aimed to investigate some clinical and dietary features in iron deficient patients with GERD. We performed a retrospective analysis of patients attending our clinic for the first time between January 2014 and June 2015. Patients with confirmed ID and diagnosed as having GERD were included in the study. Clinical and dietary features were recorded from the electronic medical records. The ID was diagnosed in a blood sample obtained for routine check-up. Twenty-nine women were included in the study. The median age was 48.5 years, and the median age of menarche was 12 years. The median body mass index was 25.1 kg/m<sup>2</sup>. The number of pregnancies and children was 1.3 and 1.3, respectively. The mean iron level in the study group was 14.4 ± 2.8 µmol/L, the mean ferritin level was 17.6 ± 8.9 µmol/L and the mean haemoglobin level was 126 ± 11 g/L. While gastritis and hiatal hernia were present in all of the patients, ID and anaemia were detected in 23 patients (79%). The study group had a median MED (Medical Expenses) of 517, indicating a mean cost of 507€/year. Gastroesophageal reflux disease is frequent in female patients with ID. The coexistence of ID and GERD should be considered for the treatment of anaemia and the symptoms of the patients.
